

## AgriLink: 31 Years of Connecting Philippine Agriculture

For more than three decades, Agrilink, organized by the Foundation for Resource Linkage and Development, has brought together the people, ideas, and solutions shaping Philippine agriculture. What began as a platform for exchange has grown into the country's leading international trade exhibition for agriculture, food, aquaculture, and agribusiness.

With the theme "Logistics: The Key to an Efficient Market and Value Chain," the 2025 edition put the spotlight on the systems that help agricultural goods move from production areas to markets. It also showed the scale of Agrilink's growing industry community. Across 15,000 square meters of indoor and outdoor exhibition space, Agrilink welcomed more than 330 participating companies and nearly 18,000 registered visitors over three days. International exhibitors from 12 countries joined local companies, government agencies, and industry organizations in showcasing technologies, products, and opportunities across the value chain.

The exhibition also featured three indoor pavilions - the Korea Pavilion, the China Pavilion, and the Philippine Seed Industry Association Pavilion, alongside the AANI Pavilion in the outdoor area. Supported and co-organized by more than 26 public and private trade associations, the event created space for international exchange, sector-focused showcases, and direct connections between farmers, fisherfolk, agribusinesses, policymakers, technology providers, and buyers.

Knowledge exchange remained central in Agrilink, with 21 seminars covering logistics, market access, cold chain systems, irrigation, farm mechanization, livestock and poultry, aquaculture nutrition, rice milling, food processing, quality sorting, and smart farming. The Department of Agriculture and its attached agencies also highlighted programs and initiatives through exhibits, seminars, and industry discussions.

Each edition reflects the changing needs of the sector. Agrilink has provided a meeting ground for new technologies, practical solutions, and partnerships that help move Philippine agriculture forward. In 2026, the 31st edition builds on this role with a timely focus on agri food hub facilities and the connections needed to strengthen value and market chains across the country.
